

Military Shipboard Low Smoke Coaxial Cables

TIMES MICROWAVE SYSTEMS
An Amphenol Company

INTRODUCTION

Times Microwave Systems, an Amphenol company, designs and manufactures high performance coaxial cables, connectors and cable assemblies for a broad range of RF transmission applications. For more than 60 years, Times has been the leader in the development of new cable technologies to meet the demands of evolving RF and microwave applications. This technological, manufacturing and application leadership continues today.

Since its inception, Times has been dedicated to the improvement of coaxial cable technology and the development of new and innovative cable products to address the increasingly rigorous demands placed on RF transmission products.

The expertise that has provided cable solutions for the demanding requirements of airborne electronic warfare systems has led the way in the development of low smoke cables for shipboard, airborne and ground based military interconnect systems.

Times has been instrumental in the development of military specifications, including MIL-C-17 for coaxial cables. Times is the leading source of MIL-C-17 qualified products, holding more QPL's (Qualified Product Listings) than any other manufacturer in the world.

Times applies its expertise to customer requirements through a staff of Field Application Engineers. Unlike other cable manufacturers with limited product lines, who try to fit customer applications to their existing products, the philosophy of Times is to select or design the right product for each application.

This catalog serves as a guide to the qualified military low-smoke, non-halogen RF cables available from Times Microwave Systems.

Low-Smoke, Non-Halogen Coaxial Cables

Military Shipboard Qualifications

Since the 1940's, MIL-C-17 has been the definitive specification for coaxial, triaxial and other high performance radio frequency cables. Beginning in 1970, United States standards making organizations have been establishing safety requirements for product flame retardance, and more recently, smoke, toxicity and corrosive off-gassing properties. With revision "G", MIL-C-17 adapts qualification tests for each of these characteristics, which assures the coaxial cable you select for your applications will meet the minimum safety standards.

In 1993, per MIL-STD-454, the military began the process of inactivating the use of polyvinylchloride (PVC) radio frequency cables, that were used in military weapons' systems. A new series of cross-linked, low-smoke, non-halogen coaxial cables were qualified to replace the older inactivated PVC versions.

Many of the requirements existent in the MIL-C-24640 and MIL-C-24643 multi-conductor, low-smoke shipboard cables specifications were incorporated into revision "G" of MIL-C-17. Table I describes some of these added requirements as well as typical testing results.

In addition to the products of combustion requirements, these cross-linked, low-smoke designs offer higher levels of abrasion and fluid resistance, that are commonly required in many of today's naval shipboard environments.

Attenuation and Structural Return Loss

MIL-C-17 specifications require that attenuation and structural return loss (VSWR) be completely tested by sweeping 22 different 50 ohm cables over the frequency band for which their use is recommended. Variance in materials or in the manufacturing process can cause periodic discontinuities along a length of coaxial cable, which can introduce resonance peaks (spikes). These spikes occur when the discontinuities or changes in electrical characteristics are periodic and at half-wave distances.

When impedance changes occur periodically, there are frequencies in which all of the reflections are in phase, resulting in a large reflected signal or VSWR of the cables and their connectors. Periodic reflections can also cause substantial increase in attenuation at the resonance peaks. In the past, it was very unusual to detect these narrow band, high attenuation spikes, when cables were tested for attenuation using the older MIL-C-17D discrete frequency test procedure (generally at 400 MHz and 3 GHz and also at 10 GHz for RG-214).

Now, however, M17/190-RG214 has continuous swept maximum VSWR and attenuation requirements from 50 MHz to 11 GHz. The maximum VSWR is 1.15:1 (23 dB SRL) at 100 MHz increasing to 60 dB/100 feet at 11 GHz.

Coaxial cables that do not require "full band" swept frequency performance can be procured under separate part numbers in an unswept version. The specifications sheets for these unswept cables recommend that they not be used above 400 MHz. The user must decide which cables will best suit the situation based on cost, application and potential for system growth and improvement.

MIL-DTL-17-QPL Listing

Only qualified cables should be used for military contracts. All manufacturers of MIL-DTL-17 cables must obtain qualification approval for their cables. The qualified products are then listed in QPL-17, which is updated periodically throughout the year. Please note that all RG numbered cables have been cancelled from MIL-DTL-17 and only cables with part numbers starting "MIL/17" should be used for new military contracts.

Since there is no longer any control of "RG" specifications, many cables on the market with RG designations may be completely different in construction and performance.

Special Designs

Although MIL-DTL-17 covers a broad range of cable types, Times can also provide technical assistance in designing specialized shipboard cables to meet specific system parameters that cannot be met with existing MIL-DTL-17 cables. Please contact our Engineering Department for assistance with your specialized applications.

Qualification Inspections Critical to MIL-DTL-17H	MIL-DTL-17H Requirements	Typical MIL-DTL17H Inspection Results
Flame Propagation (IEEE-383)	8 Foot Maximum Burn	Pass
Acid Gas Generation	2.0 Maximum	0.20
Halogen Content	.20 Maximum	0.06%
Smoke Index (NES 711)	25.0 Maximum	11.4
Toxicity Index (NES 713)	5.0 Maximum	<2.2
Weathering	75% Minimum Retention	Pass
Abrasion Resistance	75 Cycles Minimum	175 Cycles
Tensile Strength	1300 psi Minimum	1800 psi
Elongation	160% Minimum	200%
Fluid Resistance	50% Minimum Retention	Pass
Heat Distortion	30%Maximum	10%

Table 1: MIL-DTL-17 shipboard cable requirements

LSRG Military Shipboard Coax

MIL-DTL-17 Qualified

- MIL-Spec Air Frame, Shipboard, Ground (Tactical) Interconnect (M17/180-/200)
- Fire Retardant / Low Smoke (non-halogen)
- Flexible For Easy Deployment / Routing

Features & Benefits

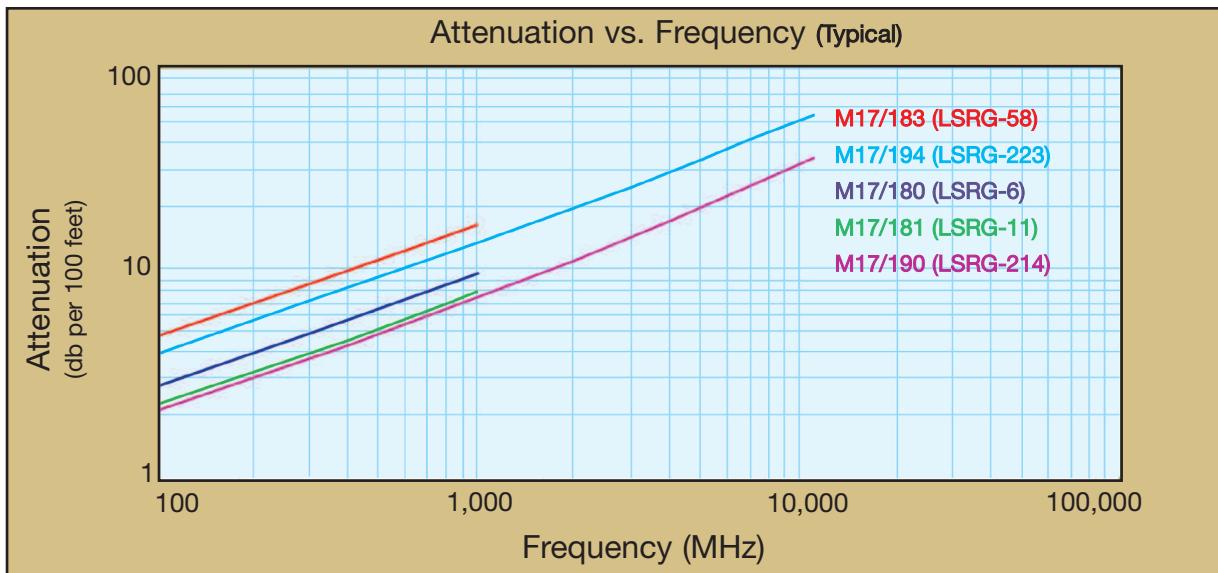

- Rugged Abrasion Resistant Jacket
- Excellent Shielding Effectiveness
- Fire Retardant (non-halogen)
- Light Weight
- Flexible for Ease of Deployment
- Excellent Connector Selection
- Fully Qualified to MIL-DTL-17H

- **Flexible:** With very tight minimum bend radius, LSRG cable can be easily routed into and through tight spaces. Ideal for tactical deployment and retrieval.
- **Excellent Loss:** LSRG has lower loss than other cables of the same size and is significantly less than the M17 spec requirement.
- **Fire Retardant:** A black UV resistant non-halogen, low smoke - fire retardant, cross-linked polyethylene jacket makes the cable rugged and resistant to the full range of military/defense environments. LSRG cables easily achieve FAR 25, NES-711 and NES-713 compliance.

- **RF Shielding:** High coverage (>95%) braids, result in >40-60 dB RF shielding (>80 dB - 120 dB crosstalk) and excellent interference immunity (ingress and egress).
- **Connectors and Assemblies:** A full range of connector interfaces is available in crimp or clamp styles. Custom pre-terminated and tested assemblies with phase matching, insertion loss matching, and other special electrical or marking requirements can also be provided.
- **Reference:** See page 8 for complete listing of qualified M17/180-/200 shipboard cable constructions.

LLSB® Low Loss Military/Shipboard Coax

MIL-DTL-17 Qualified

- Low Loss Air Frame, Shipboard, Ground (Tactical) Interconnect
- Fire Retardant / Low Smoke (non-halogen)
- Flexible For Easy Deployment / Routing

Features & Benefits

- Lower Loss
- Superior Shielding Effectiveness
- Fire Retardant (non-halogen)
- Light Weight
- Flexible for Ease of Deployment
- Excellent Connector Selection
- Fully Qualified to MIL-DTL-17H

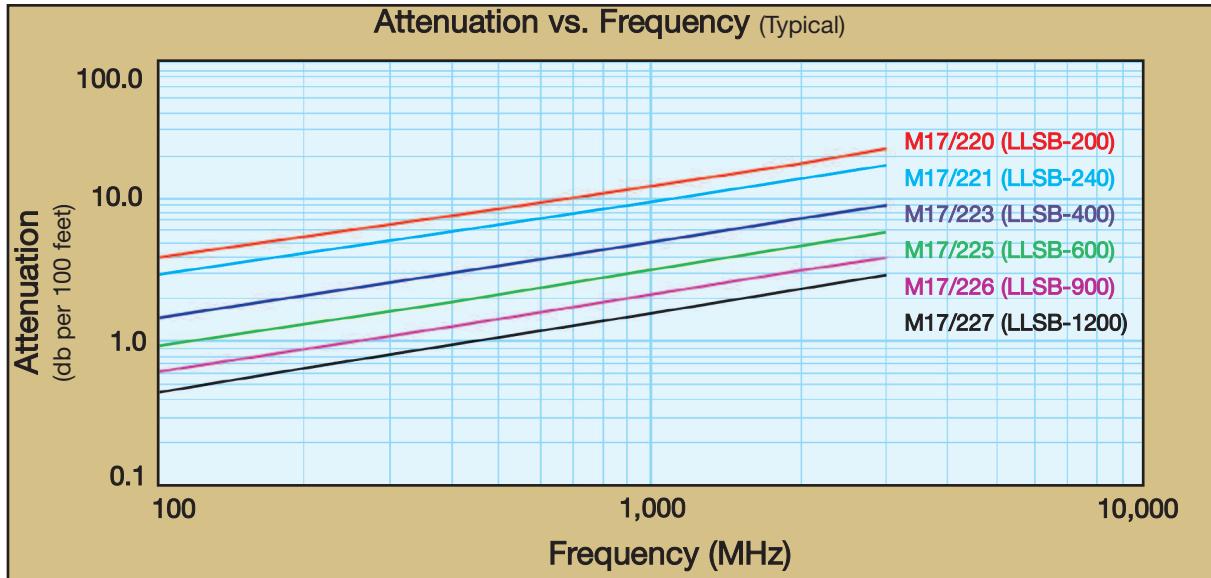

- **Flexible:** With very tight minimum bend radius, LLSB cable can be easily routed into and through tight spaces without kinking. The bonded-tape outer conductor provides superior flexibility and ease of bending compared to previous generation M17/RG type, corrugated copper, or smooth wall copper hard-line cables.
- **Low Loss:** LLSB has lower loss than other cables of the same size. This is achieved through the use of a high velocity dielectric and bonded aluminum tape outer conductor. The proprietary gas-injected closed cell foam dielectric prevents water migration through the cable and provides excellent crush resistance.
- **Fire Retardant:** A black UV resistant non-halogen, low smoke - fire retardant, cross-linked polyethylene jacket makes the cable rugged and resistant to the full range of military/defense environments. LLSB easily achieves FAR 25, NES-711, NES-713 compliance.

- **RF Shielding:** The bonded aluminum tape outer conductor is overlapped to provide 100% coverage, resulting in >90 dB RF shielding (>180 dB crosstalk) and excellent interference immunity (ingress and egress).
- **Phase Stability:** The intimately bonded structure and foam dielectric of LLSB cables provide excellent phase stability over temperature and with bending. The high velocity dielectric results in superior phase stability as compared with solid and air-spaced dielectric cables.
- **Connectors and Assemblies:** A full range of connector interfaces is available in crimp or clamp styles in addition to supporting installation tools. Custom preterminated and tested assemblies with phase matching, insertion loss matching, and other special electrical or marking requirements can also be provided.
- **Reference:** See page 9 for complete listing of qualified M17/220-/229 constructions.

Materials Abbreviations

AL = Aluminum, BC = Bare Copper, BCCAI = Bare Copper Clad Aluminum, BCCS=Bare Copper Covered Steel, CCS = Bare Copper Clad Steel, FSC = Flat Silver Plated Copper, Intl = Interlayer Tape (Aluminum Polyester), Int = XLPE, Interlayer, Ivs = Intergal Vapor Seal, PE = Polyethylene, Quadshield= Aluminum Braids/Tapes, SC = Silver PLated Copper, TC = Tinned Copper, XLPE = Crosslinked Polyethylene

In addition to the MIL-DTL-17 qualified products listings, Times Microwave Systems has also been approved by NAVSEA for a wide range of low-smoke designs specified for shipboard use. The table below lists these NAVSEA designs.

NAVSEA Approved Low-Smoke Coaxial/Triaxial Cables

NAVSEA No	Conductor inches (mm)	Dielectric inches (mm)	Shields inches (mm)	Jacket inches (mm)	Weight lbs/ft (kg/m)	Impedance (ohms)	Capacitance pF/ft (pF/m)	Velocity (%)	Temp.t Range F (C)	Frequency Range Attenuation Typical

Waterblocked, Low-Smoke Triaxial Cables

For applications that require watertightness in addition to the performance requirements of the LS/LT designs, Times is qualified to the M17/134 and M17/135 designs. These triaxial designs meet the 25 psi-6 hour watertightness test, as well as the 1000 psi-2 hour hydrostatic tests that are requirements of MIL-DTL-17.

See page 9 for materials abbreviations.

TCom®-LS Low Loss Coaxial Cables

For applications that require repeated flexing and the need for excellent electrical performance, the TCOM-LS series offers a non-halogen, low smoke alternative to the more rigid MIL-C-28830 corrugated copper designs. Detailed data sheets are available upon request.

Our Mission

TIMES MICROWAVE SYSTEMS designs and manufactures high performance RF transmission lines. These products consist of flexible coaxial cable, connectors, accessories and cable assemblies.

We are committed to understanding the needs and requirements of our customers and providing highly engineered, cost effective products.

TIMES MICROWAVE SYSTEMS is dedicated to total customer satisfaction and superior results for our shareholders in all we do.
